### BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

## IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

New LS170 nucleic acid monitoring, preventing from lung tissue - useful for detecting, and treating lung disease, particularly

Claim 17; Page 97; 120pp; English.

Sequences AN95563-477 represent LSI70 polypeptide fragments which contain at least on epitope in thair sequences. The present invention relates to detection of starget LSI70 polymuclocide that comprises treating a test sample with any LSI70 polymuclocide that comprises that it least 50 percont identity as to me LSI70 specific nucleic acid that which are fragments derived from a thin any for the sequences (AXX0081-09) which are fragments derived from the continuous partially coveriapping sequences transcribed may be applied to the continuous partially coveriapping sequences transcribed section and transformed victor and transformed victor and transformed victor and transformed victor and partially and transformed victor and expression system complaints the LSI70 nucleic acid segmences a many transformed victor and expression system complaints the LSI70 nucleic acid segmences are made for expression system complaints. sequences are used to express recombinant polypeptides. The polypeptides are used to raise Ab and for drug screening. LS170-related muchaic acid can be used to isolate related sequences; as tandards and reagents in assays; as targets for drug screening, and as components or targets for therapy, e.g. antisense, ribozyme or triplex-forming can be

diagnosis, staging, monitoring, in vivo imaging, prevention and treatment of lung disease, specifically concer, and to indicate predisposition to such disease. Particularly detection of LS170 polynucleotide, LS170 antigons, or anti-LS170 antibodies is indicative of disease. Cells transformed with an expression system comprising the LS170 nucleic acid sequences are used to express recombinant polypeptides. The polypeptides are used to raise Ab and for drug screening. LS170 related nucleic acid can be used to isolate related sequences; as standards and reagents in

isolate related sequences;

                                                                                                                                                          contain at least on epitope in their sequences; the present invention relates to detection of a target ISI70 polynuclectide that comprises treating a test sample with at least one ISI70 specific nucleic acid that has at least 50 percent identity with any of the sequences (AXX00801.09) which are fragments derived from various clones of ISI70 gene. The ISI70 nucleic acid fragments represent a set of contiguous, partially overlapping sequences transcribed from lung tissue. They are used for diagnosis, staging, monitoring, in vivo imaging prevention and treatment of lung disease. Specifically cancer, and to indicate predisposition to such disease. Particularly detection of ISI70 polynucleotide, ISI70 antibodies is indicative of disease. Cells of transformed with an expression system comprising the ISI70 nucleic acid remains a such transcribed in the composition of the compositio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       used to deliver therapeutic agents to LS170-expressing cells; directly as therapeutic agents (by neutralising LS170 polypeptides); in competitive binding drug screens, and to generate anti-idiotypic antibodies for use in rational drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW95471 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAM33515 standard; Protein; 47
                                                                        Sequence
                                                                                                               The present invention relates to single exon nucleic acid probes (SENP: see ANI31315-ANI57546). The present sequence is a peptide encoded by onc such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived predicting, measuring and displaying gene expression in samples derived

The present sequence is a peptide encoded by one such probe. The SENPs are derived from human head calls. The SENPs are derived from human in the calls. The SENPs have been derived from human expression to produce a single exon microrray, which can be used for measuring lone expression in a sample derived from human exertical epithalial cells. By measuring spene expression, the probes are therefore useful in grading and/or staging of diseases of the certix, notably

                                                                                                  The present invention relates to single exon nucleic acid probes (SBNP, see ANII)115-ANI5766). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particular, breast cancer, disorders of development, aethology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to movel single exon nucleic acid probes (see ANIO010-ANIO067). The present sequence is a peptide encoded by one superbother the probes are useful for measuring human dene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 27; SEQ ID No 14258; 322pp; English.

I The sequence is predicted from a full-length cDNA clone (see AAX59356) isolated from a human adult brain (thalamus) cDNA library. The invention provides cDNA clones (see AAX59352-58) cencoding novel secreted proteins (see AAX5946-10) of the human testis, brain and foetal kidney. The polyvuolectides and proteins are predicted to have biological activities which would make them suitable for treating preventing or ameliorating medical conditions in humans and animals, although no supporting data are provided. Suggested activities include nutritional, cytokine, cell proliferation or differentiation, immunostimulatant (e.g. as vaccine) or immunosuppressive, haematopoies is regulating, tissue growth, activin or inhibin, chematopoies is regulating, tissue cannot support the control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 25;

Lung specific genes for developing products for diagnosing, monitoring, staging, prognosticating, imaging and treating lung cancer .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis stading monitoring in vivo imaging prevention and treatment of lung disease, specifically concer, and to indicate predisposition to such disease. Particularly detection of LS170 polynchectide, LS170 antigens, or anti-tS170 antibodies is indicative of disease. Cells transformed with an oxpression system comprising the LS170 nucleic acid sequences are used to express recombinant polypeptides. The polypeptides are used to raise Ab and for drug screening, LS170 related nucleic acid can be used to laolate related sequences; as standards and reagents in assays; as targets for drug screening, and as components or targets for therapy, e.g. as antisense, ribozyme or triplex founds or geners. Ab can be sthorapeutic agents (by neutralising LS170 expressing cells; directly competitive binding drug screens, and to generate anti-idiotypic antibodies for use in rational drug design.
                                                                                                                                                                                                                                    04-AUG-1998;
                                                                                                                                                                                                                                                                                                                           17-FEB-2000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lung specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAW95463-471 represent LSI70 polypeptide fragments which contain at least on epitope in their sequences. The present invention relates to detection of a target LSI70 polypucleotide that comprises treating a test sample with at least one LSI70-specific nucleic acid that has at least 50 percent identity with any of the sequences (AAX00801-09) has at least 50 percent identity with any of the sequences (AAX00801-09)
                                                                                                                                                                                                                                                                                19-JUL-1999;

The specification describes methods for diagnosing the presence of lung cancer in a patient. The method comprises measuring levels of lung specific genes in cells tissues or bodily fluids, and comparing the level to that of a normal human control. The methods can be used for diagnosing, montroring, staging or propositicating lung cancer, especially metastactic lung cancer. Antibodies against proteins encoded by lung specific genes on the used for the proteins against proteins encoded by lung specific genes.

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuties, peripheral neuropathy and localised, neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
                                                                    This invention relates to the human LUNX protein and the polynucleotide sequence encoding it. The invention includes a vector containing a LUNX polynucleotide, a host cell transformed with the vector, and an antibody polynucleotide, a host cell transformed with the vector, and an antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-SEP-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JP2001078772-A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclorosis; Shy-Prager Syndrome; chemotactic; chemotactic; thrombolytic; drug screening, archemokinetic; thrombolytic; drug screening, archemokinetic;
                                                                                                                                 The invention relates to human nucleic acids (AAIS798-AAI61369) and the encoded polypeptides (AAI38642-AAA42713) with mootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as peripheral nervous system diseases, such as altheimer's, Parkinson's disease. Buntington's disease, anyotrophic
                                                                                                                                                                                                                                                                                                                                                                                                                                        Wang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human polypeptide

The invention relates to human nucleic scids (AMI57798-AAI51369) and the encoded polypetides (AMI8642-AAM(2213) with mootropic immunosuppressant and cytostatic ectivity. The polynucleotides are useful in gene therapy. A composition containing a polypetide or polynucleotide of the invention may be used to containing a polypetide or polynucleotide system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central injuries, peripheral auropathy and altherms, such as peripheral nervous system diseases, such as localised neuropathies and central injuries system diseases, such as lateral sciences; and Shydraen, but contained the containing and shydraen other uses include the utilisation of the activity, came to such sometime system suppression, and thrombolty circ activity, came adjacents and therapy, drug screening, assays for receptor activity, arthritis and inflammantalon, leukemmias and containing assays for receptor activity, arthritis and inflammantalon, leukemmias and containing and the containing assays for receptor activity, arthritis and inflammantalon, leukemmias and containing and the containing and containing and the containing and containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 2; SEQ ID NO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (HYSE-) HYSEQ INC

The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM3642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and localised neuropathies and central nervous system diseases, such as Alabehmer's, Parkinson's disease, Huntington's disease, suppreparation of the activities such as: Immune system disease, such as utilisation of the activities such as: Immune system disease.

Novel nucleic acids and polypeptides, useful for such as central nervous system injuries -

treating disorders

New molecular chaperones useful for diagnosis, treatment of cancer and inflammation prevention and

Claim 1; Fig 1; 35pp; English.

This sequence is the human heat shock protein homologue, HSPHH-1 of the invention. The HSPHH-1 polynucleotide was isolated from the BRAITT21 CDNA library constructed from oncorous brain tissue. The HSPHH-2 DNA sequence was isolated from the BRSNNOT18 cDNA library constructed with HSPHH care useful for disparated with HSPHH care useful for disparated with HSPHH care useful for describing heads and stine and stine complements are also useful as antagonists for complements are useful for drug screening using care useful for describing the sequences and the sequences of compounds. The HSPHH-1 and HSPHH-2 nucleotide sequences and the complements, are useful for detecting upstream sequences their complements, are useful for detecting upstream sequences and their complements, are useful for detecting upstream sequences. probes.

This polypeptide, designated bp537_4, comprises a novel human scretced protein that is encoded by a cDNA clone (see ANV88758) and solven from a human foetal kidney cDNA library. Homology is a silvated from a human foetal kidney cDNA library. Homology is a silvated control to some database sequences. The invention provides isolated control to some database sequences. The invention provides isolated control to some database sequences. The invention provides isolated control to some database sequences. The invention provides isolated control to some database sequences. The invention provides isolated control to some database sequences. The invention and the sequence is some database sequences and set and sequences and sequences are simulating or suppressing activity, and control to the sequence is sequenced activity, and cativity, receptor. Ideal activity, and cativity, receptor. The present invention describes primer sets for synthesising 5602 full-length cDNs defined in the specification. Where a primer set comprises: (a) an oilgo-dT primer and an oilgonucleotide comprises to the complementary strand of a polynucleotide which comprises one of
                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                  Ota T,

Nucleic acids encoding useful for vaccinating polypeptides from Staphylococcus epidermidis, against infections, e.g. endocarditis

Claim 18; Page 315; 2188pp; English.

(II), given in AAGBIASA to ANNUALLY CITY and therefore can be used. I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the s. epidermidis polypeptides (II) via the production of vectors s. epidermidis polypeptides (II) via the production of vectors of the value o AAH53970 represent nucleic acids (I) encoding in AAG81454 to AAG83120, from Staphylococcus encoding polypeptides
lococcus epidermidis.
therefore can be used be the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human nucleic acids (AMIS798-AMIS1369) and the encoded polypeptides (AMIS42-AMA/2131) with mootropic immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the paripheral nervous system diseases, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's diseases, amyotrophic lateral sciencesis, and Shy-Drager Syndrome, other uses include the utilisation of the activities such as: Immune system suppression. Activin/inhibh activity, chemotatic/chemokinetic activity, heads and chramation, leekaemias and cassays for receptor activity, arthritis and inflammation, leekaemias and cassays for receptor activity, arthritis and inflammation, leekaemias and cassays for receptor activity, arthritis and inflammation, leekaemias and cassays for receptor activity, arthritis and inflammation, leekaemias and cassays for receptor activity, arthritis and inflammation, leekaemias and cassays for receptor activity.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAIS7798-AAIS1369) and the encoded polypeptides (AAIS462-AAMA213) with noutropic. I mamunosuppressant and cytostatic activity The plyvacionides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous properties, and control nervous system places. Such and localised neuropathies and central nervous system places. Such and labeliner's, parkinson's disease, Huntington's disease, such alternal sclerosis, and Shy-Dager Syndrome. Other issee, amorrophic utilisation of the activities will be such as Immuno system places them. Statistically, chambas and the properties are properties and the properties are properties.

These genes are essential for fungal growth and development. The proteins can be used in methods to identify compounds that have fungicialal activity. Compounds with fungicidal activity can be used for suppressing fungal growth, especially of filamentous fungi. Fungi that can be suppressed include plant pathogens (e.g. Septoria tritici, Stagnospora modorum, and Mannaporthe grisea) and human pathogens (e.g. Candida albicans, and Aspergillus fumigatus).
This invention describes a novel polynucleotide isolated from human immunodeficiency virus type 1 subtype C.6" which can be used for the induction of specific humoral and cellular immune responses. (1) and polypeptides (II) encoded by them, are useful in pharmaceuticals, vaccines and disgnostic agents, particularly for treatment or prevention of human immune deficiency virus-1 (HIV-1) infections, also for rational
                                                                                        Disclosure;

                                        of a phenylalanine dehydrogenase protein, pdh, from Rhodococcus sp. M4. The encoding pdh nucleic acid is used to produce recombinant Rhodococcus L-phenylalanine dehydrogenase, which can be used to produce L-amino acids from the corresponding alpha-keto acids, e.g. to produce L-phenylalanine from phenylpyruvic acid (e.g. for the production of aspartame), to screen for phenylaktonuria in newborn infants and to monitor the efficacy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    design of test or therapeutic reagents, or gene therapy vectors. Polypopildes, especially antibodies, specifically directed against (II) are similarly useful as pharmaceutical and dispositic against (II) are specially useful as pharmaceutical and dispositic agains of special to the intersubtype C/B of HIV-1 so are useful in regions (particularly China and South-East Asia) where this subtype is prevalent the products of the invention have antiviral activity. This sequence represents a protein encoded by the HIV-1 subtype C genome described in

                                                                                                                      This sequence represents a Staphylococcus aureus protein of unknown function, and is encoded by a DNA sequence of the invention. The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antinicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Staphylococcus aures protein immune response induction, eye infection, antibody production; when the response of satroint estimal infection; respiratory infection; inhibitor; batterial infection; cardiac infection; central nervous system, kidney infection; inhibitor; batterial infection; entral nervous system, kidney infection; infection; truct infection; antibicrobial compound identification; broad spectrum antibictics;

DNA encoding Rhodococcus L-phenylalanine dehydrogenase production of recombinant enzyme

This sequence is used to describe a method which results in the isolation of a phenylalanine dehydrogenase protein, pdh, from Rhodococcus sp. 44. The encoding pdh nucleic acid is used to produce recombinant Rhodococcus (-phenylalanine dehydrogenase, which can be used to produce L-minno acids from the corresponding alpha-kec acids, e.g. to produce L-minno acids from phenylpyruvic acid (e.g. for the production of aspartame), to screen for phenylatonuria in newborn infants and to monitor the efficacy of low-phenylalanine diets.
